

DECANTER CENTRIFUGES & PLANTS FOR SOLID/LIQUID SEPARATION

TURNKEY DECANTER PLANTS THE FAST WAY TO SUCCESS

HILLER decanters are very compact machines, which offer high capacity with minimal space requirement. Because of this, they are highly suited as main device for compact solid/liquid separation units.

Immediately ready for your separation task

Mobile HILLER plants, containerised or trailer mounted, are used in a range of applications, for example the

dewatering of municipal sludges. Many customers choose containerised plants to avoid the need for a new building. HILLER turnkey plants are completely ready for operation: mounted, piped, wired and already test run at the factory. HILLER decanter plants are therefore immediately ready for use on your separation task with minimum installation effort.

Complete solutions from a single source

HILLER manages the whole process for you.

From the initial design and engineering to the final start up and commissioning on your site.

AVAILABLE FOR ALL SIZES

HILLER turnkey plants are available for all centrifuge sizes, as well as in two or three phase designs. They are also available for special processes such as food processing or explosion-proof applications. They can also be equipped with any level of automation or remote control functionality according to customer requirements.

INDIVIDUALITY

HILLER plants are always tailored to the exact requirements of each project. Customers will always be pleased with the quality, ease of operation, high economic efficiency and well-engineered design, but most of all with the unrivalled separation performance.

Try for yourself – we have a wide range of mobile plants available for test or rental.

A FULL RANGE OF POSSIBILITIES

- Containerised
