

AZO Vibration Bottom

type VB ... design S for reliable discharge from hoppers

Reliable discharge

Sturdy design

Simple construction

For universal use

Preferred applications

For reliable discharge of powdery, crystalline, high-fat and granular bulk materials from hoppers.

It can be used for almost all materials in the foodstuffs, plastics, chemical and pharmaceutical industries.

Special advantages

- Simple and sturdy design
- Reliable discharge
- For universal use
- Uniform fall of the product column (materials flow)
- No stacking and bridging
- Also suitable for problematic and flow-resistant materials
- Optimum emptying of hoppers, without residues

THE INNOVATION

How it works

The vibration bottom is set in horizontal circular vibrations by the laterally mounted unbalance vibrator. The vibrations are transmitted to the materials column via the relieving cone which is oscillating in the interior of the vibration bottom. Thus the material is put in motion falling uniformly without core flow or bridging. The product reliably reaches the discharge through the ring gap. The intensity of the

vibrations, which depends on the type of material and the required output, can be set at the unbalance vibrator.

Dimension diagram for vibration bottoms VB 1100 – VB 2400, design S

- S = Silo design > 5 m³
 1) = Primary silo with cylindrical discharge
 2) = Primary silo with conical discharge

Technical data

Collar: EPDM black
 silicon (FDA approved)
 Design: Mild steel, epoxy-coated light grey RAL 7035, nickel chromium steel 1.4301; 1.4571
 Various surface finishings are available depending on hygiene requirements
 Power supply: 400V, 50 Hz
 special voltages are possible

Type	Drive kW	Protection type	Heat class	Gross capacity	Weight kg
VB 1100	0,80	IP 65	B	ca. 200 dm ³	160
VB 1400	0,80	IP 65	B	ca. 385 dm ³	210
